iWa250
2x50W RMS @4Ω Wireless Hi-fi Wi-fi Multi-room Amplifier

The MTX iWa250 amplifier is equipped with a high performance uncompressed Wi-Fi input compatible with Apple® Airplay, DLNA UPnP, a Toslink optical input, and a single RCA analog input. The three sources switch automatically, with the last one to connect being active. Inputs can be switched using the remote control.

Its aluminum construction and small size allow it to be hidden in a wall, ceiling, or in a piece of furniture without risk of overheating. Once A/C power is connected you can enjoy music anywhere without having to see the amplifier.

The unit uses "Direct Digital" amplification technology meaning there is no DAC (digital to analog converter), eliminating loss and noise. The sound is clear, musical, and very dynamic.

The infrared remote control allows you to control the amplifier, even through the ceiling or wall because of the IR receiver on an extension cord. The dual-band Wi-Fi card is very strong and particularly sensitive because it has dual external antennas.

It is possible to stream music to several iWa250 ("multi-room") amplifiers simultaneously and to control them from an application on a smartphone, tablet or computer. MTX recommends the software suite "Airfoil" for its performance and its availability for multiple platforms including Mac®, Windows®, iOs® and Android®.

The diagram on the right illustrates the iWa250 in an audio hub application. It is connected to two or four speakers (in-wall, bookshelf, or floor standing) and it receives three different sources (Toslink, Wi-Fi, and AUX).

User scenario 1: Spotify can be launched from your smartphone and the iWa250 will turn on and play music from Spotify. The television could then be turned on and the iWa250 will automatically switch to the Toslink input. A CD player could then be turned on and the amplifier will switch to the AUX input. If all sources are turned off and after 15 minutes of inactivity, the iWA250 will go into standby mode. It will reactivate after any one of the three is turned on again and starts transmitting data.

Key Features :
Simple Operation : No turning the unit off and on
Powerful : Direct digital technology and power output
Ultra compatibility : Apple Airplay, DLNA, UPnP, Mac, PC, iOs, Android

Bottom line, the iWa250 is clearly the best amplifier in the market to play your music where you want.

Specifications

• **Power :**
- **2x25W RMS @ 8Ω 0,1%THD+N**
- **2x50W RMS @ 4Ω 0,1%THD+N**
• **Inputs : Wifi, RCA and Toslink**
• **Remote :**
- **IR with 75cm cable**
- **Software (iOS & Android)**
• **Power supply :**
  100~120V - 200~240V, 50 - 60Hz
• **Dimensions : 20x8x8cm**

So small that you can hide it in ceillings, walls or furnitures

Triple universal inputs (Airplay DLNA, Toslink, RCA)

Auto switch between all the inputs. The last to connect being active

Multiroom available with multiple iWa250 and iT1air

All aluminum quality construction

Hifi quality sound thanks to the «Direct Digital» technology

IR and software remote

In-Wall, Bookshelf, Floorstanding, etc...

2 or 4 speakers (Total 4Ω minimum)
